Relation between flow and percentage of loss/sent packages, on a simple FIFO queueing system, simulating a multi-service network in a "best effort" scenario.

Legend:
- flow 0 -> 8 #packet sent (4Mbps CBR App) :: Client 1 to Client 6
- flow 1 -> 6 #packet sent (FTP connection) :: Client 2 to Client 4
- flow 1 -> 7 #packet sent (FTP connection) :: Client 2 to Client 5
- flow 2 -> 6 #packet sent (30 VOIP connections over UDP) :: Client 3 to Client 4
- flow 6 -> 2 #packet sent (30 VOIP connections over UDP) :: Client 4 to Client 3
- flow 7 -> 1 #packet sent (FTP connection) :: Client 5 to Client 2
- flow 8 -> 0 #packet sent (4Mbps CBR App) :: Client 6 to Client 1

y-axis: percentage of loss/sent packages
x-axis: Time in sec.
